

Experiment No. 1

Aim : Demonstration of Inline, Internal and External JavaScript, Console Methods and Uses Information Webpage

Software / Tools Required:

1. Visual Studio Code
2. Google Chrome
3. HTML5
4. JavaScript (ES6)

Theory: JavaScript is a client-side scripting language used to make web pages interactive. It can be included in an HTML document in three different ways:

a) Inline JavaScript:

JavaScript code is written directly inside HTML elements using event attributes like onclick. b)

Internal JavaScript:

JavaScript code is written inside the `<script>` tag within the HTML file.

c) External JavaScript:

JavaScript code is written in a separate .js file and linked using the `<script src=""></script>` tag.

Console Methods:

JavaScript provides several console methods for debugging:

1. `console.log()`
2. `console.error()`
3. `console.warn()`
4. `console.info()`
5. `console.table()`
6. `console.time()`

Case Study Implemented: Making of a webpage of student information connected to the SIT Nagpur department webpage and using JavaScript to display a "Welcome" alert was created successfully.

Conclusion: The practical was performed successfully. Different methods of JavaScript, including internal, inline, and external, were demonstrated.
